

CAMERA FILTER PACK V2.0.0

By Vetasoft
<http://www.vetasoft.com>

1. Version History

V2.0.0

2. Include in the package

Including More than 150 filters !

2. How it's work ?

It's simple :

1. go to the Camera that you want to add the FX.
2. click on the « add component » (in the inspector)
3. select Camera Filter Pack and choose your filter.

Good to know:

- You can combine filters. Use multiple filters on your camera.
- Work for Unity 4.x Pro and Unity 5 Free & Pro !
- Some filters may be slow on mobile but some filter work great. Choose wisely depending of your need.
- Create your own filter, Camera Filter Pack provide lot of video effect (ex : add blur, add threshold, etc...)
- Comic shader is awesome for creating black & white game with red effect for blood.
- You can use animator and animation to create cinematic transition or effect.
